Test	Outcome	Screenshot	Explanation
Tried using no as a response instead of true and false	The code crashed		The application is only programmed to accept true or false
Typed in true and it asked for address	The code continued to ask the next question		Since the application only accepts true or false, true was typed in and the program asked for the address.
Typed in false and it asked for the name.	The code did not ask for the address as it was a collection order.		The code did not ask for the address and false was typed in meaning that it was not a delivery therefore an address was not needed.
Typed in my name.	The code asked for a name then asks me the next question.		The code asks for a name as it will be needed for the customer bill after the order has been taken.
Typed in l which stands for large for pizza size.	The code asks for the size of the pizza and only accepts the input s,m,l which stands for small, medium and large.		The program asks what size the pizza is wanted and the final prices also increase depending on how large the pizza is.

Typed in l and it asks what toppings should be added.	The code simply asks for a name of the topping.		The program asks for the name of the topping however there is no set name for the program to recognise, which means any name for the ingredient will be okay for it the only difference is the more toppings added to the pizza the more the prices increase not the toppings name.
Typed in cheese and the code asked should another topping be added.	The code then asks after the topping was entered should another topping be added.		The code then asks after the topping was entered should another topping be added then the program accepts a true or false answer and after it has been answered true it will continue to ask for toppings until answered false.
This is the code keeping track of each pizza order.	It shows the size, topping, extra toppings and another pizza.		This is the code keeping track of each pizza order and it also shows the size, topping, extra toppings and another pizza. If another pizza is added, then another bill like this will be made.
The program asked for another pizza and false was typed in.	After false was typed in the customer bill pops up.		The program asked for another pizza and false was typed in. After false was typed in the customer bill pops up. If true was typed in the entire process would have repeated until false was typed in.

The program displays the receipt after the order is finished.	The program displays the price of the total order as well as the name of the customer and address.		The program displays the receipt after the order is finished. The program displays the price of the total order as well as the name of the customer and address.
Ordered 3 pizzas with only 1 topping large.	The total for the pizza was 23.83 including the discount of 2.37.		3 pizzas were ordered with one topping each and the size for all of them were large. The total for the pizza was given a discount due to orders over 20 pound being given a discount.
Typed in true for delivery then asked for address.	In the receipt the address was displayed.		If the customer wanted a delivery the program will ask for an address, then the user will type in an address.
Typed in true for delivery then asked for address.	In the receipt the address was displayed.		Since the customer wanted a delivery there is also a delivery charge added to the bill.
Typed in 1 extra topping tomato.	The program displays what topping was added and the answer to the question want another topping which is true.		The program displays the full information of the pizza order showing everything from the name and address of the customer to the toppings of the pizza and how many pizzas were added.

Typed in 1 extra pizza.	The program displays the number of pizzas ordered and the list of the orders for each pizza.	 **Name** **Value** i 5 info [shumel,bolton] delivery true order [[large,cheese,tomato,,], [large,cheese,tomato,,], [,,,]] anotherpizza true pizzas 2 pizza [large,cheese,tomato,,]	The program displays the number of pizzas that were ordered and each order for the pizza and its toppings and size.
