Role Description

Role	Typical work
Administrative Assistant	Email, documents, spreadsheets, web systems, online meetings, and basic customer records.
Project Manager	Reports, meetings, project planning, reviewing drawings, dashboards, and client communication.
Architect / CAD Designer	CAD drawings, 2D drafting, 3D modelling, large design files, multiple monitors, and design reviews.
3D Visualisation Specialist	Rendering, 3D visualisation, large models, high-resolution textures, media output, and client visual presentations.

The Administrative Assistant handles daily operations by managing emails, organising, attending online meetings and preparing documents. They maintain spreadsheets and customer records; they also navigate a variety of web systems to keep information organised and the internal workflow running.

Hardware Specification

For an administrative assistant role handling emails, documents, spreadsheets and video calls will make up a large portion of the workflow so a reliable mid-range system will be ideal. A multicore processor such as the AMD Ryzen 5 or intel i5 will ensure efficient multitasking between a mix of the tasks required. At least 16 GB of RAM will also keep said tasks running simultaneously without lag or performance drops. A large SSD will help provide fast boot times as well as rapid file read and write speeds while still having ample space for documents. A 1080p display will help reduce eye strain after long hours of reading and entering data.

Buildcore Evidence screenshots

AutoCAD Screenshot:

Role ID: 1 Administrative assistant

Component Justification

Role ID	Component	Product name
1	Case	The Lian Li A3-mATX Micro ATX Mini Tower was selected as it will be large enough to hold all the components and large enough to have good air flow so it doesn't overheat while being within budget.
1	CPU	The AMD Ryzen 5 5600 was selected as it's a 6-core processor with 12 threads so it will be able to manage multitasking whatever the workload.
1	Motherboard	Gigabyte A520 M K V2 AM4 DDR4 Micro ATX was selected as it supports the AM4 socket of the CPU and has a build in Wi-Fi card
1	GPU	ASRock Intel Arc B570 Challenger 10GB GDDR6 OC will provide more than sufficient graphical performance to the build while remaining within the budget
1	RAM	Corsair Vengeance LPX 32GB (2x16GB) DDR4 3200 CL16 Black will provide the build with enough memory that it will be able to seamlessly multitask without running into memory faults

1	CPU Cooler	AMD Wraith Stealth Socket AM4 supports the CPU and will help keep it cool while remaining within the budget
1	Storage	ADATA XPG GAMMIX S50 Lite 2TB M.2 SSD PCIe 4.0 NVMe. Will provide ample amount of storage at a fast speeds so the assistants can access the variety of documents requied without hinderance.
1	Power Supply	be quiet! Straight Power 12 Black 750W Fully Modular 80+ Platinum provides enough power to support all of the components with surplus while still maintaining a good energy rating
1	Case Fan	ARCTIC P12 120mm Black are a budget fan which will provide air flow to the pc without being too loud

Role 2: Project Manager

2	Case	The BGears Mid Tower Black Glass Side Panel was selected as it is a budget friendly enclosure featuring a glass panel to showcase internal components though cable management and airflow options may be basic.
2	CPU	Intel Core Ultra 6 285KF was selected because it is a powerful high end desktop processor designed for demanding productivity workloads.
2	Motherboard	The ASRock Steel Legend B860 DDR5 ATX was selected because it features a mainstream motherboard supporting DDR5 memory and modern connectivity tailored for Intel Core Ultra platform.
2	GPU	The Gigabyte GeForce RTX 5070 WINDFORCE OC SFF 12GB GDDR7 was selected because of its high-performance graphics card built on NVIDIAs Blackwell architecture equipped with 12GB of speedy GDDR7 memory for excellent modern ray tracing.
2	RAM	The Crucial Pro Black 32GB (2x16GB) DDR5 was selected as it has a high capacity fast dual memory kit that ensures smooth multitasking and plenty of room for applications.
2	CPU Cooler	Thermalright Assassin 120mm Silver was selected because it has a single tower air cooler and is also cost effective. It may run warm under heavy sustained loads from a high tier ultra processor.
2	Storage	The Western Digital Green SN350 2TB m.2 SSD was selective as it has a high-capacity SSD though the green line is kept as a budget option lacking DRAM cache compared to faster performance drives.
2	PSU	The Thermal Smart Certified 700W was selected as it has a 700W power supply unit that meets basic system power requirements though higher tier end components like the RTX

		5070 and Ultra CPU would benefit from a higher wattage and higher efficiency rating.
2	Case Fan	The DarkFlash INF34 ARGB PWM 3x120mm Black was selected as it has a multi pack of addressable RGB cooling fans to help improve airflow inside the mid tower case while adding customisable lighting effects.

Role 3: Architect/AutoCAD Designer:

Role ID	Component	Product name
3	CPU	I selected the AMD Ryzen 7 9700x because when one is creating extremely detailed software such as architectural software, it relies on strong and efficient performance. I believe the AMD Ryzen 7 9700x provides this with its' high-level processor.
3	CPU Cooler	I have chosen the Thermalright Peerless Assassin 120 SE due to its' compatibility to the AMD Ryzen 7 9700x, as well as its effectiveness if the CAD designers work for extended periods, the 120 SE will allow for the components to remain cool.
3	Motherboard	The MSI B650 Gaming Plus Wi-Fi allows for workstation to have high-speed connectivity, advanced Wi-Fi capabilities and additional memory as well as the ability to expand the storage in the future.
3	GPU	I selected the NVIDIA RTX 4070 12GB due to its' incredible performance and smooth functionality when it comes to working on projects simultaneously/ for long periods of time.
3	RAM	I selected the 32 DDR5 RAM because the workers will be regularly working with multiple files, softwares and tabs simultaneously, which is why a sufficient memory to support this is required, which is why i felt it was appropriate to use 32GB DDR5 RAM.
3	Storage	Ensuring that the workstation has a sufficient storage is absolutely essential in a professional design environment. This is why i selected the NVMe SSD which contains 1TB.
3	Power Supply	I selected the 750W 80+ due to its' reliability and resistance to damage and destruction. It also reduces energy waste and allows for future component upgrades without needing to be replaced, because it will be able to keep up with it.
3	Case	I selected the Fractal Design Pop Air because its' style is modern, professional and provides an excellent workflow. Additionally, it also allows you to maintain your cables more efficiently.

Role	Quantity	Hardware cost per workstation	Total role hardware cost	Budget position
Administative Assistant	3	£839.89	£2519.67	Under £330.33
Project Manager	2			
Architect/CAD Designer	5	£1990	£9950	Under £2550
3D Visualisation Specialist	2
